

Liquid UI: System Variable: `_sessioncount`

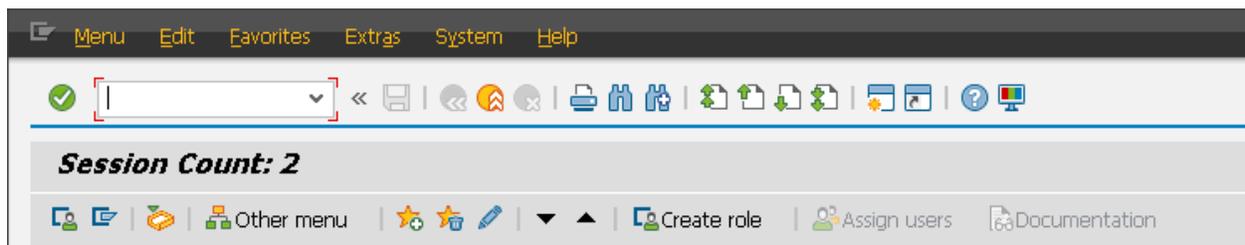

As of WS Version 1.2.296 and Server Version 3.5.523, a new system variable has been added; `_sessioncount`. This system variable returns how many sessions/connections are open in SAP. The number will increment when a new session or connection is opened, regardless of username or system ID.

User Interface

Log in to SAP and note the title of the Easy Access Screen.

Open a new session or connection and note the title in either screen. Note: If checking the original session, refresh the screen to see the updated title.

Liquid UI Code [Script]

```
SAPLSMTR_NAVIGATION.E0100.sjs x
1 // SAPLSMTR_NAVIGATION.E0100.sjs
2 title("Session Count:"+_sessioncount);
```
