

Liquid UI: System Variable: `_window_size`

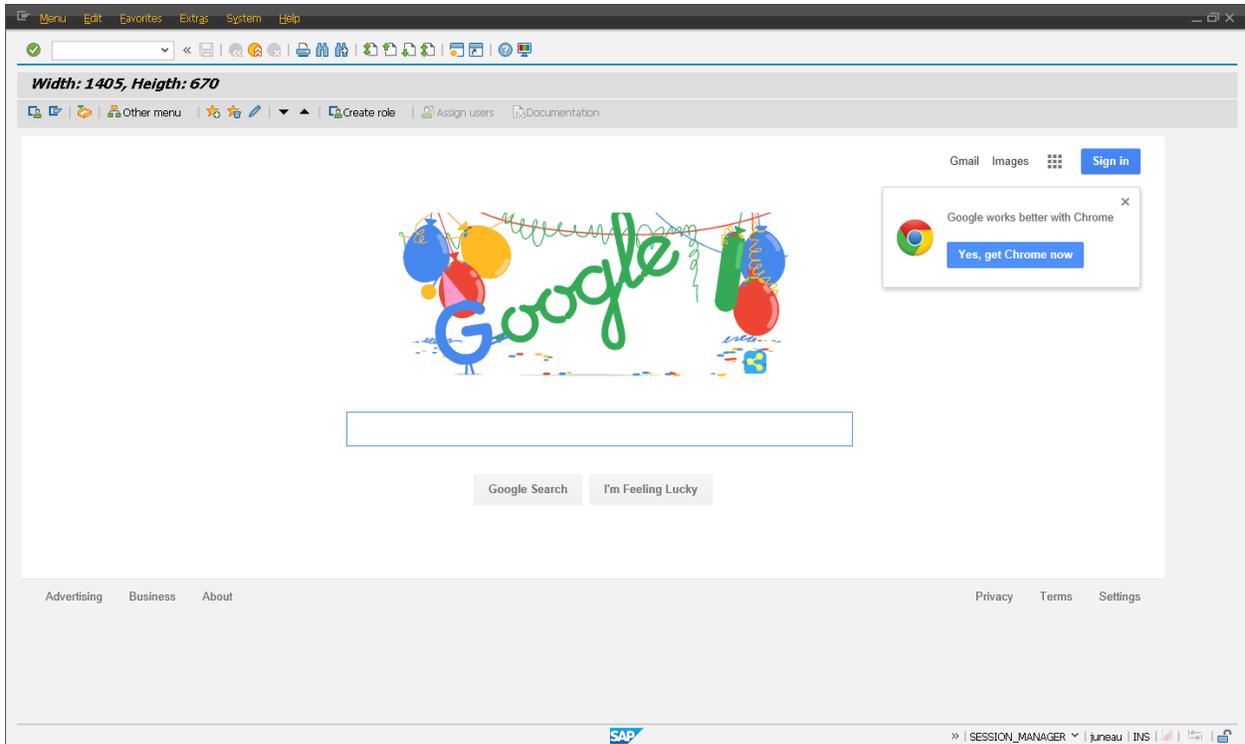

As of WS Version 1.2.296 and Server Version 3.5.523, a new system variable has been added; `_window_size`. The system variable is used to retrieve either the width or the height of your SAP window in pixels. For the width, the variable is as follows: `_window_size_x`. For the height, the variable is as follows: `_window_size_y`.

User Interface

Log in to SAP. On the Easy Access Screen, a Google webpage will show with the size based off of the width and the height. In the title, the dimensions are displayed as well.

Change the size of your window and the webpage will change accordingly.

Liquid UI Code [Script]

```
C:\Users\chirag.amin\Desktop\System Variable - _windowsize\Scripts\SAPLSMTR_NAVIGATION.E0100.sjs - Notepad++
File Edit Search View Encoding Language Settings Macro Run Plugins Window ?
SAPLSMTR_NAVIGATION.E0100.sjs
1 // SAPLSMTR_NAVIGATION.E0100.sjs
2 clearscreen();
3
4 title("Width: "+_windowsize_x+", Height: "+_windowsize_y);
5
6 y=_windowsize_x/7.4;
7 x=( _windowsize_y+280) / 38;
8
9 view([0,0], [x,y], "http://www.google.com");
```
