

## Using GPS on Liquid UI Android

### Pre-requisite:

Enable the location service from the Notification area on the device.

### Purpose:

Providing the coordinates of geographical location of the device where the notification or document or order was generated by the end-user for later tracking.

### Usage:

1. Navigate to any transaction.
2. Now single tap and hold on the desired input field.

3. A strip of options will pop-up on the screen. Select GPS.

The screenshot displays the LIQUID Create... application interface. At the top, there is a header bar with a menu icon, the LIQUID logo, and the text "Create...". Below the header, a dark grey menu strip is visible, containing the following options: F4, SCAN, GPS (highlighted with a red box), SELECTALL, CUT, COPY, and PASTE. Below the menu strip, there is a form area with various fields and buttons. The form includes a "Notification" field with the value "200000801", a "Notific. Status" field with the value "OSNO", and a "Sales ord." field. There are also buttons for "INIT" and "Tasks". Below the form, there is a grid of icons representing different functions: Notification, Reference object, Malfunction, breakdo, Location data, Cust. address, Contact person addre, Message address, and Obj. address. The "Cust. address" icon is highlighted with a blue underline. At the bottom of the screen, there is a section for customer information, including fields for "Sold-to party", "Street/Hse No.", "Location", "Telephone", and "Fax".
