

Web Server Appendices

6.3 Using Web Server with SAP Portals

A portal is a website that functions as a suite of commonly used services. It also serves as an entry point or gateway to the Web. You can configure SAP NetWeaver to serve as such a portal for integration with the Web Server. This section will explain how to configure SAP NetWeaver as a portal for Web Server. The following topics will be covered.

- [Creating Folders](#)
- [Creating Roles](#)
- [Creating iViews](#)
- [Creating Pages](#)
- [Creating Worksets](#)
- [Adding iViews to Pages](#)
- [Creating Users](#)
- [Adding Roles to Users](#)
- [Creating Groups and Assigning Roles](#)
- [Adding Users to Groups](#)
- [Configuring Single Sign-On](#)
