

iOS Introduction

2.3 Features and Functionality

Liquid UI for iOS enhances SAP users' experience by offering a wide array of features and functionalities, bridging desktop and mobile devices for streamlined business processes. Whether you're new to the software or an experienced user, this documentation will help you maximize the potential of Liquid UI for iOS.

Here, we highlight the latest features included in the release notes of Liquid UI for iOS. Refer to the [Release Notes](#) on the Liquid UI website for a detailed list of features and functionalities. The Liquid UI Enterprise license offers comprehensive support for all listed features, thus, facilitating efficient app workflows.

- **Direct SAP** native connect ensures the fastest performance between SAP and mobile devices.
- **Enhanced F4 OCX** provides the flexibility to search and filter, based on values or ranges, enhancing data retrieval efficiency.
- **Any Endian kernels format** of Liquid UI ensures smooth integration and operation across diverse system environments.
- **Localization**, Tailor your user interface to specific regions with localization support, ensuring that users worldwide can easily navigate the software to support localized user interfaces.
- **64-bit Architecture** enables your device to address more memory and deliver faster computing power, enhancing overall performance.
- **Improved table control**, featuring fluid scrolling, and support for static columns.
- **Split view** functionality enables multitasking capabilities for the concurrent operation of multiple applications or tasks.
- **SAP GUI crucial features** such as F4, F1, and multi-session support, ensure seamless integration with existing workflows.
- **Multiple connections** to the SAP Server provide efficient data exchange and communication.
- [Multi-session support](#) to speed up the SAP work process and improve operational efficiency.
- [Mobile Printing](#) right from the app enables convenient printing of documents directly from iOS devices.
- [Attaching files](#) to SAP transactions, facilitating efficient document management and collaboration within the mobile application environment.
- **Auto log-on** allows seamless connection to the SAP server, eliminating the need to enter credentials repeatedly.
- **Tile and classic themes** allow users to tailor the interface to their preferences for a more captivating and user-friendly environment.
- **Device gestures** such as flicks, swipes, and zoom provide intuitive control and enhance user interaction for smoother navigation and operation.
- **Message box, menus, calendar, combo box, and list view/table** ensure comprehensive functionality and accessibility.
- [Automating SAP transactions](#) eliminates manual processes prone to errors and delays, enhancing productivity and accuracy in transaction execution.

iOS Introduction

- [Monospace font styles](#) support greater clarity and an optimistic view of the SAP screen.
- [GPS](#) functionality to track and enter your location's latitude and longitude values in the input fields.
- [Scan Credit Card](#) enables you to scan credit card details and auto-populate them to the input fields, facilitating the seamless completion of transactions with minimal manual input.
- [Electronic Signature Support](#) enables users to sign documents and attach them to transactions directly from Liquid UI for iOS, enhancing the review process with efficient and secure document management.
- [The biometric lock](#) secures your SAP from unauthorized access by authenticating users with their face ID or fingerprint before connecting to your SAP Server.

Liquid UI Enterprise supports all the below features more efficiently and you will also get all the features included from Liquid UI Client:

- [Management Portal](#), license provisioning, and management for seamless user access and administration using Liquid UI Access Management Portal.
- [Barcode Scanning](#), is enabled on mobile devices using either the built-in camera or with third-party devices such as Linea Pro. It supports full native scanner configuration, auto-tapping, and auto-enter based on barcode attributes for effortless data entry and processing.
- [Liquid UI Server](#), is a patented solution that optimizes network traffic and consolidates screens and transactions between your SAP server and client, resulting in significant performance improvements.
- [Data Encryption using TLS](#), ensures data security during wireless transmission providing an additional layer of protection for sensitive information exchanged between devices and servers.
- [Single Sign-On](#) functionality, allows Liquid UI users to log in to the SAP system using their domain username and password.
- [Notification](#) feature enables users to track and manage SAP processes efficiently by receiving timely notifications for important events and updates.
- [SAP Workflow](#), leverage device-specific features such as email for SAP Workflow integration.
- [Web Services](#), possess features such as providing turn-by-turn directions to help users reach a specific address and translating a German-language UI to English before posting the data to SAP.

Unique solution ID: #1406
