# Designer Features 5.02.11 Viewing SAP HTML Properties

The properties dialog for the html element contains a single tab, as follows:

• <u>Html file</u>

You can modify the properties for the html element from this dialog box. The tabs are more fully explained below.

### Html file

The Html file tab appears as shown below.

The available parameters are as follows.

### Html file or URL

Specifies the HTML file location. You can enter either a path or a URL in this field.

Page 1 / 2 (c) 2025 Liquid UI | Synactive | GuiXT <dev@guixt.com> | 2025-03-29 14:21 URL: https://www.guixt.com/knowledge\_base/content/54/526/en/50211-viewing-sap-html-properties.html

## **Designer Features**

### **Template file**

if you are using a template file, enter the file path in this field.

### Display this as a floating window

Check this box to display the HTML file as a floating window, instead of being anchored to a specific location.

### Maximize the window

Check this box to maximize the size of the window. This option is only available if you select the 'Floating' option described above.
