

# WS Changing Elements

## 6.05 columnorder()

### Purpose

With `columnorder()`, you can define the position of an SAP table column in a given table control.

**Note:** `columnorder()` can only be used on native SAP table columns. It will not work on Liquid UI table columns.

### Syntax

- For Native SAP tables

```
columnorder("Col_name", value);
```

This syntax below is used when there are multiple tables on the screen.

```
columnorder("table_name, column_name",value);
```

### Options

The `columnorder` command does not take any options.

### Example

To show the usage of `columnorder()` command to move a native SAP table column, we will use an existing table from VA02 Create Standard Order: Overview section:

You can view the column labeled Material in the All items table moved to a new position within the table. The screen will now appear as shown below:

# WS Changing Elements

Change Standard Order 5235: Overview

Standard Order: 5235 Net value: 466.470,88 DEM

Sold-to party: 1175 Elektromarkt Bamby / Adlerstrasse 452 / 07545 Gera

Ship-to party: 1175 Elektromarkt Bamby / Adlerstrasse 452 / 07545 Gera

PO Number: Dq-19971022-2z PO date: 22.10.1997
