

WS Changing Elements

6.06 columnsize()

Purpose

With `columnsize()`, you can define the size of a SAP table column.

This command sets the size of a given column in a table by specifying the actual size in pixels. The value must be set to less than the default size of the column as it is used primarily to restrict entry. The size cannot be set to a value greater than the column's original size. The `columnsize` command differs slightly from the `columnwidth` command described below although they are very similar in function. The major difference is that with the `columnwidth` command, the column size can be changed in a script with the 'size' option. However, once a size is set with `columnsize`, it cannot be changed in a script.

Note: `columnsize()` can only be used on native SAP table columns. It will not work on Liquid UI table columns.

Syntax

- For Native SAP tables

```
columnsize("Col_name", value);
```

This syntax below is used when there are multiple tables on the screen.

```
columnsize("table_name, column_name",size);
```

Options

The `columnsize` command does not take any options.

Example

To show the usage of `columnsize()` command, we will use an existing table from VA02 Create Standard Order: Overview section that shows scenario of usage of this command:

WS Changing Elements

Change Standard Order 5235: Overview

Standard Order: 5235 Net value: 466.470,88 DEM

Sold-to party: 1175 Elektromarkt Bamby / Adlerstrasse 452 / 07545 Gera

Ship-to party: 1175 Elektromarkt Bamby / Adlerstrasse 452 / 07545 Gera

PO Number: Dq-19971022-2z PO date: 22.10.1997

Req. deliv.date: 01.01.2010 Deliver.Plant:

Total Weight: 6.230 KG

Volume: 73,200 M3

Pricing date: 22.10.1997

Order reason: Material ruined

Sales area: 1000 / 12 / 00 Germany Frankfurt, Sold for resale, Cross-division

Item	Material	Order Quantity	SU	S	Description	Customer Material Numb	ItCa	DG...	HgLvIt	D Firs
10	L-80F	1	CAR	✓	Pumpe Shgfhjss Etanorm 170-23...	03	TAN			0 D 23
20	L-60F	253	CAR	✓	Gluehlampe 60 Watt matt 220/2...		TAN			0 D 23

Script Details

SAPMV45A.E4001.sjs

```
columnsize("All items,Material",20);
```

Note: If the value is set to zero (0), the column itself will be deleted. This command works only with native SAP table columns.
